Ice Shield

Roof and Gutter Deicing Constant Wattage Kits

One of the leading causes of roof and gutter damage is degradation caused by the formation of ice dams during winter. These harmful accumulations can wreak havoc on your roof or gutters, leading to leaks, loss of property value, and even costly replacements.

Save yourself the headache by installing a DIY-friendly Ice Shield: Roof and Gutter Deicing Kit from WarmlyYours. The 120 V constant-wattage (5 watts per linear foot) heating cables will prevent damage to your roof and gutters all winter long.

These kits include everything you'll need for an easy and safe installation: heating cable, shingle clips, cable spacers, and install manual.

Product Information

Connection:	Plug-in
Energy Output:	5 watts per linear foot
Cold Lead Length:	6 feet
Voltage:	120 volts
Warranty:	2 years
Listing:	cUL, CSA, and cETLus
Cable Outer Insulation:	PVC
Bending Radius:	1 inch
Conductor Type:	Twin
Conductor Insulation:	XLPE
