

Cork Underlayment

WarmlyYours Cork underlayment system is an excellent insulation choice when electric floor heating is installed under laminate over a concrete slab, and is highly recommended for acoustical impact isolation and crack suppression. Cork is durable, lightweight, and is easy to install, and is the ideal solution under our Environ II™ floor heating system.

Cork features:

- Economically Priced
- Recommended under Environ II™ floor heating system
- Creates a thermal break and increases energy efficiency
- VOC-free and Environmentally Friendly
- Cut in 2' x 3' sheets to ensure flat installation (no curling or lifting)
- 1/4" (6mm) thick by 24" (61mm) wide by 36" (91mm) long
- Limited 10-year warranty

Uses and Applications

Cork should be considered when installing electric floor heat under carpet, laminate floors or floating wood floors, as well as some applications where you are setting tile or stone flooring – especially where acoustical impact isolation or crack suppression is needed. Cork is ideal for residential and light commercial applications, and is not recommended for use under self-leveling underlayment(s).

Technical Data

TEST	ASTM TEST	RESULT
Bond Strength	C482 Modified	PSI of 80
Structural Performance	C627-88	
WITHOUT CBU	1.5	RESIDENTIAL
With CBU		Heavy
Flame Spread	E84-91a	Class "A"
Thermal Insulation	C177-85	5mm = .72 R value
