

INNOVATIVE, TIME-SAVING SNOW MELTING SYSTEMS

FOR YOUR HOME

LEAVE YOUR WINTER WORRIES BEHIND

ROOF & GUTTER DEICING SYSTEMS

Leave your winter worries behind with roof and gutter deicing systems. Snow, ice dams, and water can cause damage to the roof, leaks, mold, and more – and removing it on your own is difficult and inconvenient.

Roof and gutter deicing systems keep your home safe from winter weather damage. These systems are available in two different voltages, perfect for any home*. Operate the system manually as needed, or install sensors to detect when snow and ice are present and begin the melting process—all the work is done for you!

*Note: Roof and gutter deicing and snow melting systems are hardwired into an outdoor junction box by an appropriately licensed and certified electrical contractor.

3-YEAR WARRANTY

Our 3-year warranty covers defects in workmanship as well as materials.

VOLTAGE

WarmlyYours roof and gutter deicing systems are available in 120V and 240V for residential use. The voltage needed will depend on the surface material of the roof.

120 VOLTS

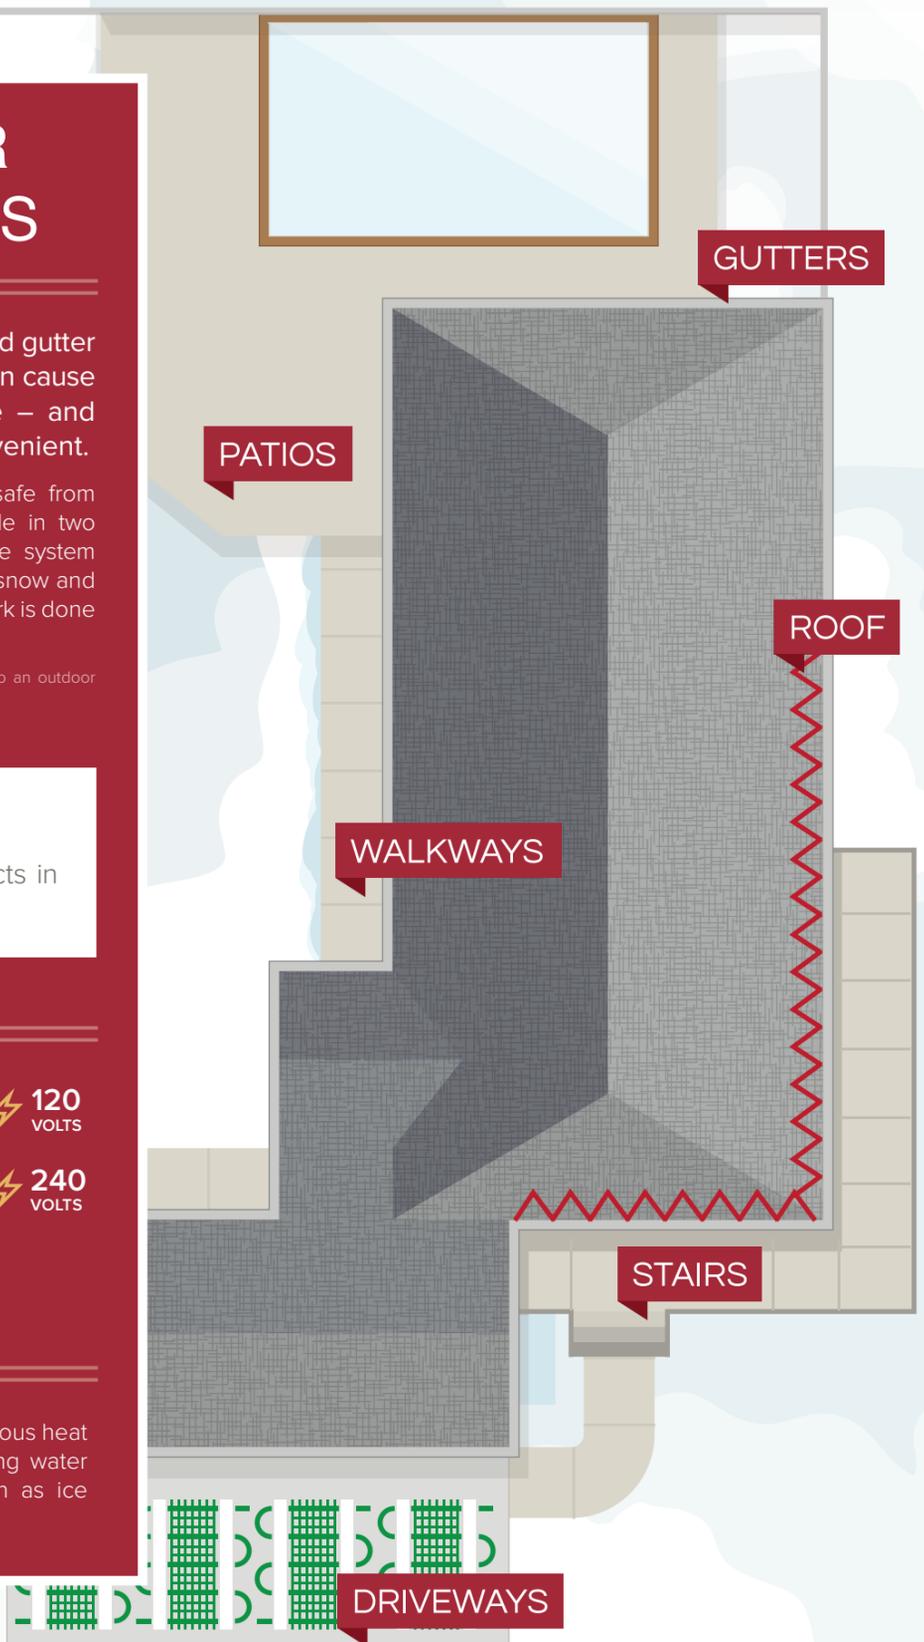

240 VOLTS

Our 240V roof deicing cable can also be used for 208V and 277V installations to meet the needs of commercial and industrial buildings.

CABLE SYSTEM

The cable system provides safe, continuous heat to gently melt snow and ice, channeling water safely away to prevent problems such as ice dams and roof leaks.

HEATED DRIVEWAYS, PATIOS, WALKWAYS, & STAIRS

Imagine never having to shovel or salt your driveway, walkway, patio, or stairs during the winter.

With electric heating mats and cable system, that dream can become a reality. With sensors that detect air temperature and moisture, the systems get to work as soon as the snow begins to fall.

Hang up your shovel and put away the salt next winter – spend your time indoors where it's cozy and warm, and let heated driveway, patio, walkway, and stair systems do the work for you.

COMPATIBLE SURFACE TYPES

Heated cables and mats work perfectly underneath asphalt and concrete, or in mortar under pavers.

ASPHALT
