

# 1050 VA TRANSFORMER WIRING TO 3 LOW VOLTAGE ROLLS

NOTE: The 1050 VA transformer can handle up to a total of 1050 watts of low voltage warming rolls. If the total watts requirements of all the rolls exceeds 1050 watts, a larger capacity transformer will be needed. To avoid nuisance GFCI tripping, please use plenty of electrical tape to prevent arcing between the conductors and their respective braids/shields.
