ZoneBraker Touchscreen Multi-Zone Snow Melting Controller

The automatic ZoneBraker Touchscreen Multi-Zone Snow Melting Controller is a high-tech yet intuitive option for controlling your electric snow melting system. The device allows for zoned control of the heating system. This means the total heating coverage can be broken into 4 separate zones (1 zone per contactor for each of the 4 contactors).

These zones can then be “turned on” independently. Zoned control like this means that the ZoneBraker can be used to operate a larger heating system since only one zone will be turned on at the same time, which reduces the total power load. This is particularly useful for big projects where available amperage may be limited, like larger driveways or walkways.

This control comes with an upper-limit temperature sensor that will be embedded in the outdoor surface along with the heating elements. This is a supplemental sensor that will help save energy and running costs during operation.

Features

- Comes with 4 contactors and can control up to 4 separate zones
- Each zone can be programmed with a customized runtime
- Upper-limit temperature surface sensor included
- Automatic operation based on the use of either a Snow Melt Aerial Sensor (AIR-SS-2) or a Pavement Snow and Ice Sensor Kit (SC-SS-PAV-6E-KIT)
- Intuitive touchscreen operation
- In-screen access to FAQs and troubleshooting guide
- Covered by a 2-year warranty

Price

SKU	MSRP
SC-MZ-TOUCH	\$5,299.00
Sensor SKU	
SC-SS-PAV-6E-KIT (sold separately)	\$1,665.00
OR	
AIR-SS-2 (sold separately)	\$749.00
