

**500 VA TRANSFORMER  
WIRING TO 2 LOW  
VOLTAGE ROLLS**

**Panel Enclosure Size:**  
**500VA = 11" x 7" x 4.5"**

**NOTE:** The 500 VA transformer can handle up to a total of 500 watts of low voltage warming rolls. If the total watts requirements of all the rolls exceeds 500 watts, a larger capacity transformer will be needed. To avoid nuisance GFCI tripping, please use plenty of electrical tape to prevent arcing between the conductors and their respective braids/shields.
